ABSTRACT

This project deals with the management of milk it deals with the purchase and sale of milk by making records in the database. The first step in the project is to add a staff member to the database the make purchase by specifying the milk type and rates with quantity, these added values will be displayed in the stock section and sales made in the transaction section. All create, read, update and delete operations are supported in this project for complete curd representation.

The mission of the Milk Production House Project is to create to communication between rural area people and dairy management. Our main goal to develop this application to encourage a dairy industry. dairy milk management system is a software application to maintain day to day transactions in a Milk Distributor Office. This software help to register all the suppliers, Buyer details, purchase, Sales details etc., The project entitled DAIRY MILK MANAGEMENT SYSTEM is a pilot project for new Milk Distributor to be start soon in the city. The management planned this Milk Distribution center to operate on the next month. They have a big plan to collect the Milks from many different sources and distribute the same for the Milk buyers. To manage all these they require a full-fledged software which will take care all these.

Milk Dairy Management System is built such a way that it should suits for all type of milk distributors in future. So every effort is taken to implement this project in this milk distributing office, on successful implementation in this dairy distributors office, we can target other milk distributors in the city.
