

CHAPTER 1

INTRODUCTION

1.1 NEED OF DAIRY MANAGEMENT

Dairy services will help the customers to get any kind of milk products at their door steps with ease. Our software is packed with many features like Brimming with numerous user-friendly features like inventory & billing management, customer records, drop-off confirmations etc. our Dairy Services software solution gives you the freedom to customize your operations and allows your client to schedule as per their requirements. Customer can instantly access your customer's full profile, their area, order & payment history & recurring orders for a desired tenure.

Each product can be customized with a myriad of settings that help you control user behavior- from “recurring only” to pre-ordered products. We have tie-ups with all the major gateway providers. Bill your clients- before/after delivery, after cut-off time, once a week on Fridays or monthly. Creating multiple routes as per your need and let our system automatically assign customers to those routes. Visualize your route stops & suggest the best routes. You can also efficiently track and fulfill all your client orders along with the maintenance of client data, location and history. And Keeping the flow of information to and from your Client or a group crystal clear to ensure smooth delivery transactions. We give you a hassle-free and convenient delivery system right at your doorstep. Automate your online milk delivery operation & let your client customize a schedule according to their needs and also we have added a lot of milk items such as cheese, yogurt, butter, curd, paneer etc.

Producer Institution Building: The PIB function helps to create, support and strengthen Milk Producer Companies which are responsive to the economic expectations and social wellbeing of their members by catalyzing the process of institution building measures encompassing capacity building of the present & prospective stakeholders & implementing effective governance practices in the Milk Producer Companies

Dairy Value Chain: The DVC function is involved with the three important business functions of a milk producer company i.e. procurement, processing & marketing of milk and milk products. The team works closely with the Producer Companies in defining and establishing strong value chain systems and processes. This value creation encourages dairy enterprises to

thrive and, in turn, improve livelihoods of milk producing farmers and nutrition for the end consumer.

Productivity Enhancement Services: The PES function aims to increase productivity of the dairy animals in the country by adopting a holistic approach to animal management. To achieve this objective, the PES group supports the implementation of the following activities- Semen Station management, Animal Breeding services, Animal Nutrition services, and Dairy farm management services.

Quality Assurance: The QA team has expertise in implementing quality systems, strengthening hygienic infrastructure, monitoring product quality and similar other processes and methods for ensuring quality of raw milk & milk products. The QA team also guides the Producer Companies on Food Safety and Standards regulations and Good Manufacturing Practices (GMP).

Business Excellence: The BE team is involved in supporting the Producer Companies in standardization & redesign of key processes through adoption of Standard Operating Procedures (SOP) to achieve improvements in performance and efficiency.

Information Technology: The IT team provided guidance to the Producer Companies in formulating their IT and Communication strategies. The IT team also supports the Producer Company in setting up IT related infrastructure, software applications, designing and implementing an effective IT and communication network.

Legal & Company Secretary: Assists the Producer Companies in obtaining various statutory & regulatory registrations, licenses, approvals, clearance etc. Required for their operationalization as well for its smooth functioning. Also assists Milk Producer Companies in implementing the process & systems to have good governance.

Human Resource & Training: Assist the Milk Producer Companies in recruiting the best talent at senior level position and help in developing training modules on leadership, competency development.

1.2 OBJECTIVE OF DAIRY MILK MANAGEMENT SYSTEM

The main objective of this application is to automate the complete operations of the Milk Distributor Office. They need maintain hundreds of thousands of records. Also searching should be very faster so they can find required details instantly. Dairy Management System which has been developed using “Android Studio” and it can be used on android platform and to enhance the project Firebase database is also used in it. The project can be implemented

online and can be deployed in the market.

1.3 SCOPE OF DAIRY MILK MANAGEMENT SYSTEM

This application is built such a way that it should suits for all type of Milk Distributors in future. So every effort is taken to implement this project in this Milk Distributor Office, on successful implementation in this Milk Distributor Office, we can target other Milk Distributors in the city. Milk Dairy Management System Project Codes and Scripts Downloads Free. Pre Business Management System is consists of complete Customer Relationship Management System. Milk dairy management system project is a software application useful for dairy forms for managing daily activities like receiving of milk from various sources.

Businesses come in different sizes and scales and management of business inventory and supply chain is something that contributes to the business. Currently, ERP and CRM packages deploy a great deal of application frameworks that get the best out of the available market. Product lines like Salesforce, Sugar CRM, etc. have shown to contribute to the business trends analysis. But the way these products operate and the cost of operation/licensing these products is very high and can be afforded by major businesses with an operating income of million dollars. The current systems deploy statistical analysis of the product supply and profits per unit. The analysis is supposed to have historical data so as to analyze any risk. The system is intended for analysis and prediction of sales in the dairy products distribution system. The Supply Chain Management system includes Manufacturer-Distributor-Retailer Customer. With this scheme, the business relationship in a supply chain management system is digitalizing for the purpose of order placement and delivery. The work aims to reduce the manual workforce required to collect and process the orders from all the various retailers and to cover all the interpersonal communication

1.4 UNDERSTANDING THE DAIRY PROCESS

Diary Food Product System In the diary food system, aims to reduce the manual workforces necessary to collect and process the orders from all the various retailers and to cover all the personal communication between retailer-distributor manufacturers. This approach digitalizes the Manufacturer-Distributor Retailer business relationship for the

purpose of order placement and delivery. Shift Summary and Daily collection reports can be viewed on mobile app. The mobile app also can be used to record transactions such as issue to record local sales. Dairy food product application shows you a price Catalog of the products (eg: milk, curd, butter, paneer, gova, etc.) And then shows the purchase order, payment history. In addition of milk several dairy products such as cream, butter, cheese, ghee even though have been categorized milk they have variety types of milks, and dairy products to view the price of the product in the price catalog. Therefore, the impact of milk and dairy products are useful and helpful for all agents and distributors. Agents are having account to login this application, and to view the order history and payments detail, due balance schemes, and register a complaint for any Queries and report. The app generates printed receipt as well as sends SMS to the Agents instantly. At the end of shift, entire data is sent to the web-server. Advantages of Food Product System is a healthy diet including a variety of foods from the five food groups such as fruit, vegetables and milk, cheese and yogurt can help you manage your blood pressure

A quality output is one, which meets the requirements of the end user and presents the information clearly. In any system results of processing are communicated to the users and to other system through outputs. In output design it is determined how the information is to be displaced for immediate need and also the hard copy output. It is the most important and direct source information to the user. Efficient and intelligent output design improves the system's relationship to help user decision-making. The output form of an information system should accomplish one or more of the following objectives. Convey information about past activities, current status or projections of the Future. Signal important events, opportunities, problems, or warnings. Trigger an action. Confirm an action. The system consists of the following modules such as User and Admin Module, Price catalog, Indent Order, Order summary, Payments, Suggestions and feedback Schemes. User and Admin Module is the first activity that opens when user installs the app. User needs to provide a correct contact number and a password, which user enters while registering, in order to login into the app. If information provided by the user matches with the data in the database table then user successfully login into the app else message of login failed is displayed and user need to reenter correct information. A link to the register activity is also provided for registration of new users. A new user who wants to access the app needs to register first before login. By clicking on register button in login activity, the register activity gets open. A new user registers by entering full name, password

and contact number. A user needs to enter password again in confirm password textbox for confirmation. When user enters the information in all textboxes, on the click of register button, the data is transferred to database and user is directed to login activity again. Registered user then needs to login in order to access the app. Validations are applied on all the textboxes for proper functioning of the app. Like information in each textbox is must that is each textbox, either it is of name, contact, password or confirm password, will not be empty while registering. If any such textbox is empty app will give message of information is must in each textbox. Also data in password and confirm password fields must match for successful registration. Another validation is contact number must be valid one that is of 10 digits. If any such validation is violated then registration will be unsuccessful and then user needs to register again. Message that app will display when one of the field is empty. If all such information is correct user will be directed to login activity for login into the app. Admin can login to the application and then add/modify the price catalog, Indent order, order summary, payments, suggestions and feedback and schemes. Price catalog is used to view the price of the products. Indent Order is used to place an order for tomorrow. Order summary is used to purchase history of the product. Payments module is used to a statement of the bill payment. Suggestions and feedback is used to get our drawbacks. Schemes contains offers and targets. The diary product app home page, catalog page, order page and offer page information related to friends, accounts, reminder and other important information. User can send stored information through mail. User can also send information to its friend (Skype, email, Hook Up) or store online (Google drive, Gmail). User can search for the stored information through search bar that will help user for easy access. User will receive an alert for corresponding reminder.

CHAPTER 2

LITERATURE SURVEY

2.1 PURPOSE OF THIS PROJECT

In small scale industry, manual work is required for collecting orders from the retailers and then compiling a composite order to be placed at the manufacturer site. They basically maintain a record of orders and sales in a database. Depending on the status of the database they perform analysis manually and make a decision. In large-scale industry, ERP and CRM packages use a great deal of application agendas that get the best out of the available market. Product lines like Salesforce, Sugar CRM, etc. have displayed to give to the business trends analysis. But the way these products operate and the cost of operation/licensing these products is very high and can meet the expense by major businesses with an operating income of million dollars. The current systems deploy statistical analysis of the product supply and profits per unit. The analysis is supposed to have historical data so as to examine any risk. So risk mitigation factors are completely out of range in the current systems. Value chain analysis is important to an understanding of markets, their relationships, the participation of different actors, and the critical constraints that limit the growth of livestock production and consequently the competitiveness of smallholder farmers. These farmers currently receive only a small fraction of the ultimate value of their output, even if, in theory, risk and rewards should be shared down the chain. This study evaluates the effectiveness of the value chain in the karachchi division, Kilinochchi district. Accurate prediction of daily milk production is a crucial aspect of the dairy industry. During the past decades, although many models using various data analytic techniques have been proposed in the literature to address the milk prediction problem, these models have yet to be widely applied in daily operations. Dairy producers need to predict milk yield at individual cow and group level. Given the increasing amount of milk production information collected every year, the difficulty also arises from analyzing big data. To address challenges in dairy supply chains and help dairy producers, especially small-scale producers, make use of data analytics in milk supply decision-making, a targeted effort to develop a feasible and cost-effective tool, Milk is launched. This tool allows dairy producers to use various prediction models to discover insight into milk production and forecast future milk yield at both the individual cow and the group level.

2.2 SURVEY OF DAIRIES IN OUR LOCALITY

2.2.1 Name of Dairy :- Janta Dairy

Q.1 Who is the Founder of your Dairy?

Ans:- shri.Badrinath Chaudhary.

Q.2 Do you have you own Dairy Farm or you order milk from other sources?

Ans:- yes,we have our own Dairy farm.

Q.3 Do you make milk products by yourself or order it?

Ans:- we order some products and remaining produts we make ourselves.

Q.4 How do you maintain your Quality of milk & milk products?

Ans:- We have several kinds of jumbo size freezers to store milk products.

Q.5 How do you deal with the leftover goods?

Ans:- Usually there aren't any leftovers.

Q.6 How much margin do you get?

Ans:- We get 5-7% margin on each product.

Q.7 How do you maintain your relation with customer?

Ans:- we always try to give the best quality to our customers.

Q.8 Normally how many customers you get in a day?

1. 50-100 ☐

2. 100-150 ☐

1. 150-200 ☐

2. More than 200 ☒

Q.9 Do you provide home delivery service?

1. Yes ☐

2. No ☒

Q.10 Do you any branches in Aurangabad?

1. Yes ☒

2. No ☐

Q.11 Have you ever tied up with any online groceries App?

1. Yes ☐

2. No ☒

Q.12 Would you like to tie up with us?

1. Yes ☐

2. No ☒

2.2.2 Name of Dairy :- KGN Dairy

Q.1 Who is the Founder of your Dairy?

Ans:- shri. Yakub Imamsab Mulla.

Q.2 Do you have you own Dairy Farm or you order milk from other sources?

Ans:- no,we order products from other sources.

Q.3 Do you make milk products by yourself or order it?

Ans:- we order products from other sources

Q.4 How do you maintain your Quality of milk & milk products?

Ans:- We store the products in deep freezer.

Q.5 How do you deal with the leftover goods?

Ans:- We distribute our leftovers.

Q.6 How much margin do you get?

Ans:- We get 1-3% margin on per product.

Q.7 How do you maintain your relation with customer?

Ans:- We try to give best quality to our customers.

Q.8 Normally how many customers you get in a day?

1. 50-100 ☒

2. 100-150 ☐

1. 150-200 ☐

2. More than 200 ☐

Q.9 Do you provide home delivery service?

1. Yes ☐

2. No ☒

Q.10 Do you any branches in Aurangabad?

1. Yes ☐

2. No ☒

Q.11 Have you ever tied up with any online groceries App?

1. Yes ☐

2. No ☒

Q.12 Would you like to tie up with us?

1. Yes ☒

2.No ☐

2.2.3 Name of Dairy :- Manesh Dairy

Q.1 Who is the Founder of your Dairy?

Ans:- shri.Manesh Sonwane.

Q.2 Do you have you own Dairy Farm or you order milk from other sources?

Ans:- no,we order products from other sources.

Q.3 Do you make milk products by yourself or order it?

Ans:- we order some products and remaining produts we make ourselves.

Q.4 How do you maintain your Quality of milk & milk products?

Ans:- We store the products in deep freezer.

Q.5 How do you deal with the leftover goods?

Ans:- We distribute our leftovers.

Q.6 How much margin do you get?

Ans:- We get 1-4% margin on per product.

Q.7 How do you maintain your relation with customer?

Ans:- We keep good Communication with our customers.

Q.8 Normally how many customers you get in a day?

1. 50-100 ☒

2. 100-150 ☐

1. 150-200 ☐

2. More than 200 ☐

Q.9 Do you provide home delivery service?

1. Yes ☐

2. No ☒

Q.10 Do you any branches in Aurangabad?

1. Yes ☐

2. No ☒

Q.11 Have you ever tied up with any online groceries App?

1. Yes ☐

2. No ☒

Q.12 Would you like to tie up with us?

1. Yes ☒

2. No ☐

2.2.4 Name of Dairy :- Prabha Dairy

Q.1 Who is the Founder of your Dairy?

Ans:- shri.babasaheb pathade.

Q.2 Do you have you own Dairy Farm or you order milk from other sources?

Ans:- yes,we have our own Dairy farm.

Q.3 Do you make milk products by yourself or order it?

Ans:- we order some products like paneer,shrikhand and remaining produts we make ourselves.

Q.4 How do you maintain your Quality of milk & milk products?

Ans:- We have several kinds of jumbo size freezers to store milk products.

Q.5 How do you deal with the leftover goods?

Ans:- Usually there aren't any leftovers.

Q.6 How much margin do you get?

Ans:- We get 4-7% margin on each product.

Q.7 How do you maintain your relation with customer?

Ans:- we always try to give the best quality to our customers and maintain their belief in our products.

Q.8 Normally how many customers you get in a day?

1. 50-100 ☐

2. 100-150 ☐

1. 150-200 ☐

2. More than 200 ☒

Q.9 Do you provide home delivery service?

1. Yes ☒

2. No ☐

Q.10 Do you any branches in Aurangabad?

1. Yes ☒

2. No ☐

Q.11 Have you ever tied up with any online groceries App?

1. Yes ☐

2. No ☒

Q.12 Would you like to tie up with us?

1. Yes ☐

2. No ☒

2.2.5 Name of Dairy :- Samarth Dairy

Q.1 Who is the Founder of your Dairy?

Ans:- shri.Dattoba Tukaram Gaikwad.

Q.2 Do you have you own Dairy Farm or you order milk from other sources?

Ans:- yes,we have our own Dairy farm.

Q.3 Do you make milk products by yourself or order it?

Ans:- we order some products like paneer,petha and remaining produts we make ourselves.

Q.4 How do you maintain your Quality of milk & milk products?

Ans:- We have several kinds of jumbo size freezers to store milk products.

Q.5 How do you deal with the leftover goods?

Ans:- we make or order the quantity as per requirement or need and if there are leftovers we try to store or it or else it gets wasted.

Q.6 How much margin do you get?

Ans:- We get 2-5% margin on per product.

Q.7 How do you maintain your relation with customer?

Ans:- we give discount to our customers and if there are regular customers we give special discounts on occasion.

Q.8 Normally how many customers you get in a day?

1. 50-100 ☒

2. 100-150 ☐

1. 150-200 ☐

2. More than 200 ☐

Q.9 Do you provide home delivery service?

1. Yes ☐

2. No ☒

Q.10 Do you any branches in Aurangabad?

1. Yes ☐

2. No ☒

Q.11 Have you ever tied up with any online groceries App?

1. Yes ☐

2. No ☒

Q.12 Would you like to tie up with us?

1. Yes ☒

2. No ☐

2.3 ANALYSIS ON LITERATURE SURVEY

In this literature Survey we have collected data from particular dairies in our locality and on the basis of that we have come up with this project. Because of 70% of dairies were in the favor of having an applications which increases their selling and gaining them profit also we have conducted an survey for customers too. In that survey we have found that it would be an great help for the customers if they get all the milk products delivered to their doorstep. Hence we are planning on creating an application which would help sellers as well as the customers and reduce their work load as well as time. Also importantly it will increase the margins and sales of milk products and the wastage of milk would be clearly reduced. The need of Application in our locality is very needy and can be used for the development of our nation towards technology. It will enhance the quality and belief of people on online delivery products and they will also get the advantage of fresh dairy milk which will help people stay fit and healthy.

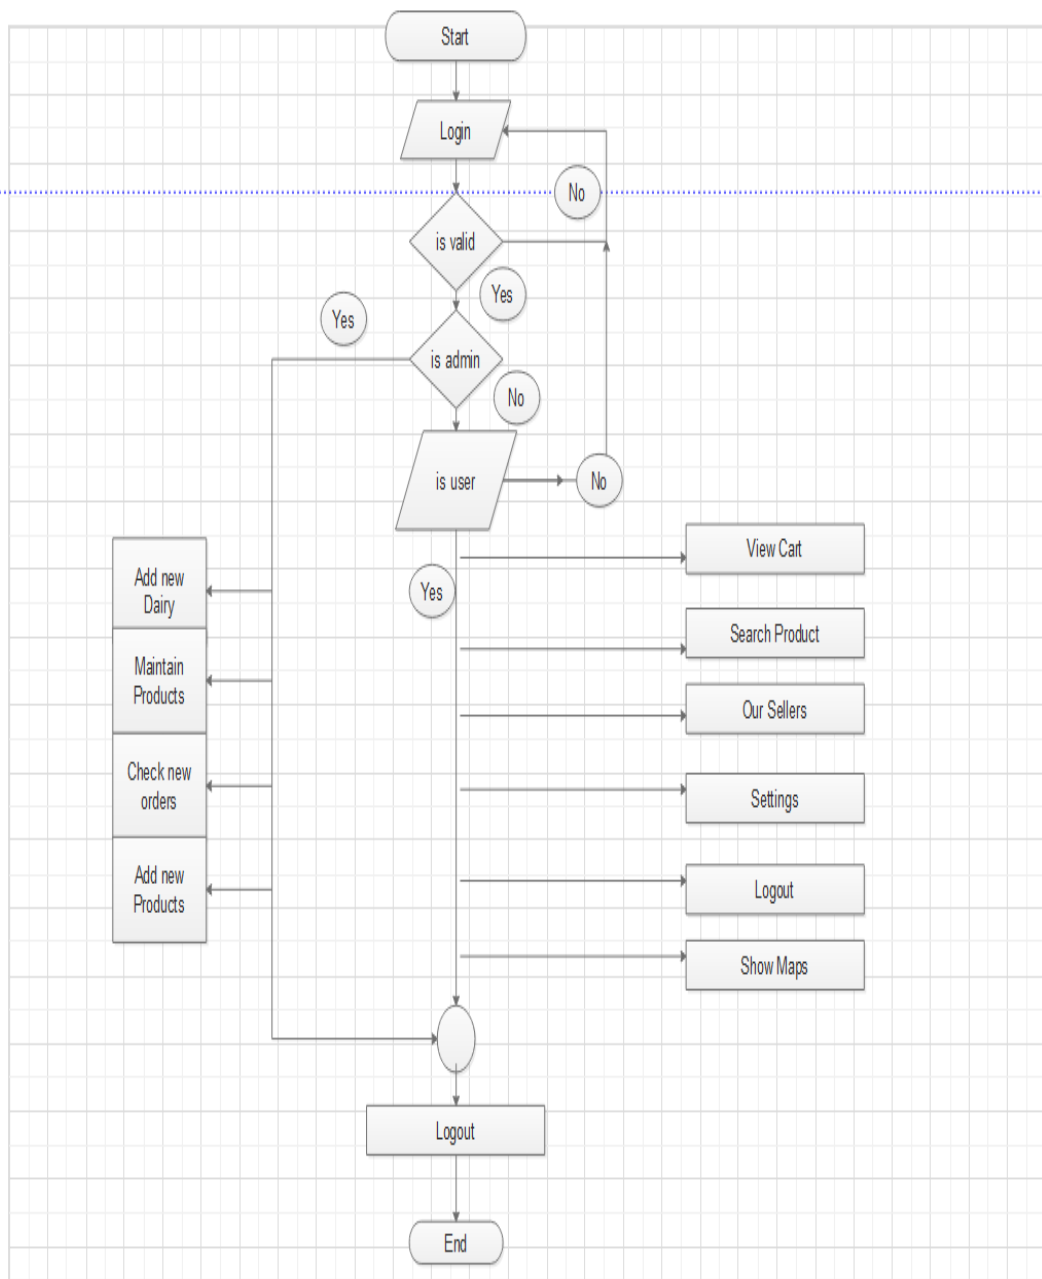

The possibility of success of this Application is quiet guaranteed because the mark of 70% makes it clear for us. . Hence we are planning on creating an application which would help sellers as well as the customers and reduce their work load as well as time. Also importantly it will increase the margins and sales of milk products and the wastage of milk would be clearly reduced. The need of Application in our locality is very needy and can be used for the development of our nation towards technology

 }

public void setPname(String pname) {

this.**pname** = pname;

 }

```
public String getPrice() {  
    return price;  
}
```

```
public void setPrice(String price) {  
    this.price = price;  
}
```

```
public String getQuantity() {  
    return quantity;  
}
```

```
public void setQuantity(String quantity) {  
    this.quantity = quantity;  
}
```

```
public String getDiscount() {  
    return discount;  
}
```

```
public void setDiscount(String discount) {  
    this.discount = discount;  
}  
}
```

6) java → com.example.dairyservices → Model → Products.java:-

```
package com.example.dairyservices.Model;
```

```
public class Products  
{  
    private String pname, description, price, image, category, pid, date, time;
```

```
public Products() {  
}
```

```
public Products(String pname, String description, String price, String image, String  
category, String pid, String date, String time) {  
    this.pname = pname;  
    this.description = description;  
    this.price = price;  
    this.image = image;  
    this.category = category;  
    this.pid = pid;  
    this.date = date;  
    this.time = time;  
}
```

```
public String getPname() {  
    return pname;  
}
```

```
public void setPname(String pname) {  
    this.pname = pname;  
}
```

```
public String getDescription() {  
    return description;  
}
```

```
public void setDescription(String description) {  
    this.description = description;  
}
```

```
public String getPrice() {  
    return price;  
}
```

```
}
```

```
public void setPrice(String price) {  
    this.price = price;  
}
```

```
public String getImage() {  
    return image;  
}
```

```
public void setImage(String image) {  
    this.image = image;  
}
```

```
public String getCategory() {  
    return category;  
}
```

```
public void setCategory(String category) {  
    this.category = category;  
}
```

```
public String getPid() {  
    return pid;  
}
```

```
public void setPid(String pid) {  
    this.pid = pid;  
}
```

```
public String getDate() {  
    return date;  
}
```

```
public void setDate(String date) {  
    this.date = date;  
}
```

```
public String getTime() {

}
```

```
public void setTime(String time) {  
    this.time = time;  
}  
}
```

7) java → com.example.dairyservices → Model → Users.java:-

```
package com.example.dairyservices.Model;
```

```
public class Users
```

```
{  
    private String name, phone, password, image, address;
```

```
public Users()
```

```
{
```

```
}
```

```
public Users(String name, String phone, String password, String image, String address) {
```

```
    this.name = name;
```

```
    this.phone = phone;
```

```
    this.password = password;
```

```
    this.image = image;
```

```
    this.address = address;
```

```
}
```

```
public String getName() {  
    return name;  
}
```

```
public void setName(String name) {  
    this.name = name;  
}
```

```
public String getPhone() {  
    return phone;  
}
```

```
public void setPhone(String phone) {  
    this.phone = phone;  
}
```

```
public String getPassword() {  
    return password;  
}
```

```
public void setPassword(String password) {  
    this.password = password;  
}
```

```
public String getImage() {  
    return image;  
}
```

```
public void setImage(String image) {  
    this.image = image;  
}
```

```
public String getAddress() {  
    return address;  
}
```

```
public void setAddress(String address) {  
    this.address = address;  
}  
}
```

8) java → com.example.dairyservices → Prevalent → Prevalent.java:-

```
package com.example.dairyservices.Prevalent;
```

```
import com.example.dairyservices.Model.Users;
```

```
public class Prevalent  
{  
    public static Users currentOnlineUser=new Users();  
  
    public static final String UserPhoneKey = "UserPhone";  
    public static final String UserPasswordKey = "UserPassword";  
}
```

9) java → com.example.dairyservices → ui → gallery → GalleryFargment.java:-

```
package com.example.dairyservices.ui.gallery;
```

```
import android.os.Bundle;  
import android.view.LayoutInflater;  
import android.view.View;  
import android.view.ViewGroup;  
import android.widget.TextView;
```

```

import androidx.annotation.NonNull;
import androidx.annotation.Nullable;
import androidx.fragment.app.Fragment;
import androidx.lifecycle.Observer;
import androidx.lifecycle.ViewModelProviders;

import com.example.dairyservices.R;

public class GalleryFragment extends Fragment {

    private GalleryViewModel galleryViewModel;

    public View onCreateView(@NonNull LayoutInflater inflater,
                             ViewGroup container, Bundle savedInstanceState) {

            }
        });
        return root;
    }
}

```

10) java → com.example.dairyservices → ui → gallery → GalleryViewModel.java:-

```
package com.example.dairyservices.ui.gallery;
```

```
import androidx.lifecycle.LiveData;
```

```
import androidx.lifecycle.MutableLiveData;
```

```
import androidx.lifecycle.ViewModel;
```

```
public class GalleryViewModel extends ViewModel {
```

```
    private MutableLiveData<String> mText;
```

```
    public GalleryViewModel() {
```

```
        mText = new MutableLiveData<>();
```

```
        mText.setValue("This is gallery fragment");
```

```
    }
```

```
    public LiveData<String> getText() {
```

```
        return mText;
```

```
    }
```

```
}
```

11) java → com.example.dairyservices → ui → home → HomeFragment.java:-

```
package com.example.dairyservices.ui.home;
```

```
import android.os.Bundle;
```

```
import android.view.LayoutInflater;
```

```
import android.view.View;
```

```
import android.view.ViewGroup;
```

```
import android.widget.TextView;
```

```
import androidx.annotation.NonNull;
```

```

import androidx.annotation.Nullable;
import androidx.fragment.app.Fragment;
import androidx.lifecycle.Observer;
import androidx.lifecycle.ViewModelProviders;

import com.example.dairyservices.R;

public class HomeFragment extends Fragment {

    private HomeViewModel homeViewModel;

    public View onCreateView(@NonNull LayoutInflater inflater,
                             ViewGroup container, Bundle savedInstanceState) {

            @Override
            public void onChanged(@Nullable String s) {
                textView.setText(s);
            }
        });
        return root;
    }
}

```

12) java → com.example.dairyservices → ui → home → HomeViewModel.java:-

```

package com.example.dairyservices.ui.home;

import androidx.lifecycle.LiveData;

```

```

import androidx.lifecycle.MutableLiveData;
import androidx.lifecycle.ViewModel;

public class HomeViewModel extends ViewModel {

    private MutableLiveData<String> mText;

    public HomeViewModel() {
        mText = new MutableLiveData<>();
        mText.setValue("This is home fragment");
    }

    public LiveData<String> getText() {
        return mText;
    }
}

```

13) java → com.example.dairyservices → ui → slideshow → SlideShowFragment.java:-

```

package com.example.dairyservices.ui.slideshow;

import android.os.Bundle;
import android.view.LayoutInflater;
import android.view.View;
import android.view.ViewGroup;
import android.widget.TextView;

import androidx.annotation.NonNull;
import androidx.annotation.Nullable;
import androidx.fragment.app.Fragment;
import androidx.lifecycle.Observer;
import androidx.lifecycle.ViewModelProviders;

```

```

import com.example.dairyservices.R;

public class SlideshowFragment extends Fragment {

    private SlideshowViewModel slideshowViewModel;

    public View onCreateView(@NonNull LayoutInflater inflater,
                             ViewGroup container, Bundle savedInstanceState) {
        slideshowViewModel =
            ViewModelProviders.of(this).get(SlideshowViewModel.class);
        View root = inflater.inflate(R.layout.fragment_slideshow, container, false);
        final TextView textView = root.findViewById(R.id.text_slideshow);
        slideshowViewModel.getText().observe(getViewLifecycleOwner(), new
Observer<String>() {
            @Override
            public void onChanged(@Nullable String s) {
                textView.setText(s);
            }
        });
        return root;
    }
}

```

14) java → com.example.dairyservices → ui → slideshow → SlideShowViewModel.java:

```

package com.example.dairyservices.ui.slideshow;

import androidx.lifecycle.LiveData;
import androidx.lifecycle.MutableLiveData;
import androidx.lifecycle.ViewModel;

public class SlideshowViewModel extends ViewModel {

```

```

private MutableLiveData<String> mText;

public SlideshowViewModel() {
    mText = new MutableLiveData<>();
    mText.setValue("This is slideshow fragment");
}

public LiveData<String> getText() {
    return mText;
}
}

```

15) java → com.example.dairyservices → ViewHolder → CartViewHolder.java:-

```

package com.example.dairyservices.ViewHolder;

import android.view.View;
import android.widget.TextView;

import androidx.recyclerview.widget.RecyclerView;

import com.example.dairyservices.Interface.ItemClickListener;
import com.example.dairyservices.R;

public class CartViewHolder extends RecyclerView.ViewHolder implements
View.OnClickListener
{
    public TextView txtProductName, txtProductPrice, txtProductQuantity;

distributionPath=wrapper/dists

zipStoreBase=GRADLE_USER_HOME

zipStorePath=wrapper/dists

distributionUrl=https\://services.gradle.org/distributions/gradle-5.6.4-all.zip

CHAPTER 6

CONCLUSION

- From this project we have learned that there is a need of such type of application which can be very helpful for the customers and the seller. This application will reduce the time of supply for the milk products so that the customers would get all the product at their home with all the freshness and purity.
- While building this project there were many concepts that were unknown for us in the android studio. But as we started building it we have learned many concepts of android and built a successful project for dairy products.
- In future if **BlackDairy** will be successful and if the demand will increase of the customers, then there will be many new features that can be added in the blackdairy in the version 2.0 such as ongoing delivery process and live delivery systems. According to the demand in future the blackdairy can be published on a well known platform, so that we can help the customers to improve the ordering experience and maintain good relation between the user and customers.
